

## Helpful Hints

- **Restrictions Deviations** are created on an hourly basis and are used to record a reason as to what conditions are limiting the site from achieving a particular production target.
- In order for users to respond to Deviation Alerts the Administrator must have the **Custom Location List** defined for their area and assign one or more **Work Assignment** to have access to use that location list. A Work Assignment can only be assigned to one Custom Location List.

## Procedure

1. Log in as the **Restriction Reporting Administrator** for your site.
2. Go to the Administration menu and select "Configure Restriction Lists".

3. Once the **Restriction Location Lists** window is displayed select which Custom Location List you wish to edit or create a new list if required.
4. Click on the **Edit...** button to display the **Manage Restriction Location List Tree** window.
5. Click on the **Work Assignments** tab to manage which **Work Assignments** can use this Location List when responding to Deviation Alerts.

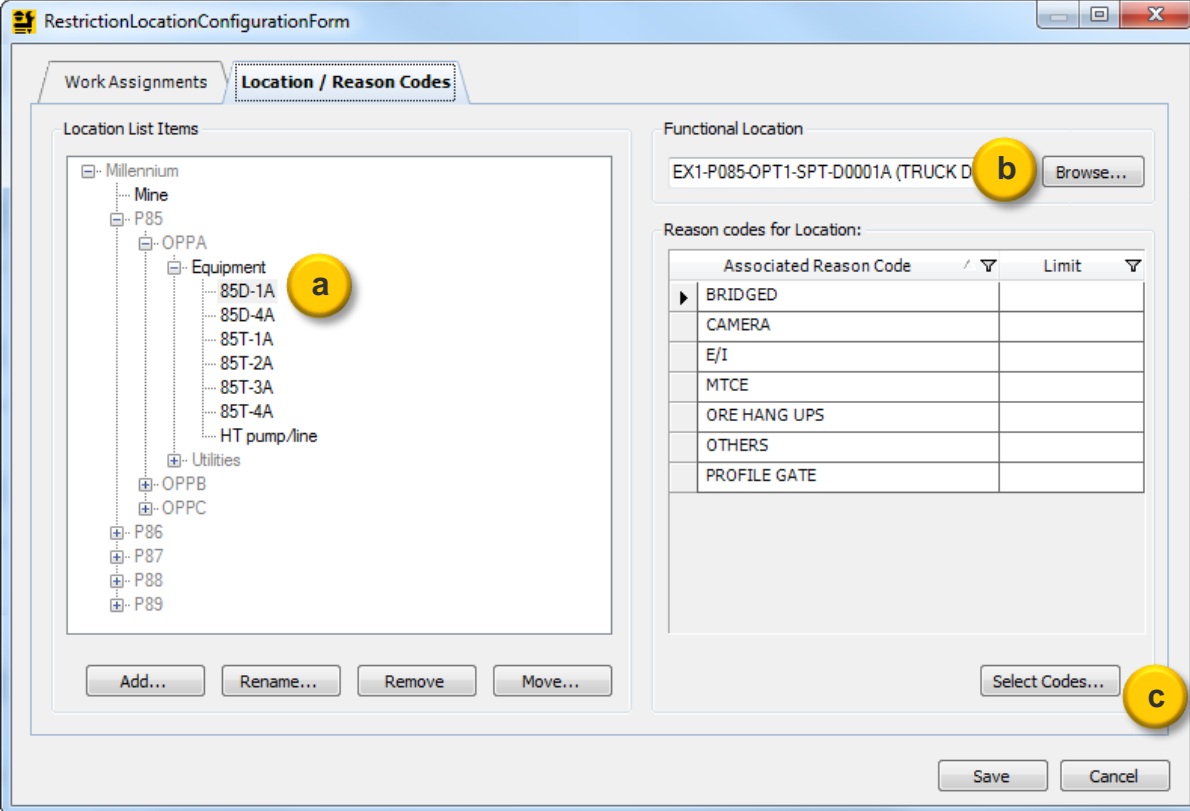

Each Work Assignment can ONLY be associated to one Custom Location List at a time.

6. Click on the **Location / Reason Codes** tab to manage the individual **items of Location List**. Any item that needs to be available for reason code assignment must have the following fields filled out:

# MANAGE RESTRICTION LOCATION LISTS AND REASON CODE ASSOCIATIONS

QUICK REFERENCE GUIDE (QRG)

- a) **Select** an item in the Location List.
  - b) **Specify** what **Functional Location** that this item will be reported against.
  - c) **Select** what **Reason Code(s)** should be made available for selection.
7. Click on **Save** to save your work and go back to the **Manage Restriction Location List Tree** window.
