Purpose of this QRG

- To teach you how to view Restrictions in the OLT

Intended Audience for this QRG

- Supervisors in the OLT
- Operators in the OLT
- Read-only users in the OLT

Purpose of Restrictions in the OLT

- To attribute a reason (code) to a condition which limits Extraction from achieving a particular production target
Prerequisites

- You must have access to the OLT software application
- You must have a Supervisor, Operator or Read-only user role in the OLT to complete the procedure described below

Helpful Hints

- Administrators in the OLT must first set up Restriction Definitions before others may view Restrictions

- 'Restriction' functionality in the OLT is only available to, and used by, Oil Sands – Extraction

- Each Restriction is attributed to a FLOC, for example, a weigh scale in mining. If a weight scale fails, Extraction may be restricted from meeting production targets.

- If you wish to view 'Restrictions for 'all' shifts, then navigate to the Deviations screen by clicking on the Deviations tab (located on the top of your screen). Note: the view may vary depending on what your OLT Administrator sets up.

Procedure

1. On the navigation pane, click Restrictions to navigate to the Restrictions screen.

2. Click Deviations tab (located on the top of your screen) to view 'all' Deviations

   Note: If you wish to view 'current shift' Deviations only, then navigate back to the Priorities screen, by

   clicking the Priorities icon *.*
